

Self Storage - Single Level Buildings

G&M Stor-More have a range of single level self storage building plans which can be adapted to your site or they can have customised plans designed especially for your requirements.

G&M Stor-More's range of single level self storage buildings offer range of options including:

- Drive up units or larger facilities with internal corridors and various unit sizes.
- Easy turning corners to allow turning vehicles to manoeuvre around the facility, minimising the possibility of damage to the building
- Concrete mullions between roller doors for increased strength and security.
- Can be engineered to most reasonable sites, as well as stepped or cantilever construction on sloping sites
- Protection from the elements with recessed internal entry points and roll over roofing with no ridge cap, minimising rain and water from entering through these areas.

We'll help you stor-more.
